## 2024_28_III_OOPS Using Java Lab

### 2028_REC_OOPS using Java_Week 2_Q5

Attempt : 1
Total Mark : 10
Marks Obtained : 10

### Section 1 : Coding

1. Problem Statement

Ted, the computer science enthusiast, has accepted the challenge of writing a program that checks if the number of digits in an integer matches the sum of its digits.

Guide Ted in designing and writing the code to solve this problem using a 'do-while' loop.

*Input Format*

The input consists of an integer N, representing the number to be checked.

*Output Format*

If the sum is equal to the number of digits, print "The number of digits in N matches the sum of its digits."

Else, print "The number of digits in N does not match the sum of its digits."

Refer to the sample output for formatting specifications.

***Sample Test Case***

Input: 20
Output: The number of digits in 20 matches the sum of its digits.

***Answer***

```
// You are using Java
import java.util.*;
class digits{
   public static void main(String args[]){
      Scanner in=new Scanner(System.in);
      int a=in.nextInt();
      int temp=a;
      int n=0;
      int s=0;
      while(temp!=0){
         n++;
         temp=temp/10;

      }
      int t=a;
      while(t!=0){
         int r=t%10;
         s=s+r;
         t=t/10;
      }
      if(s==n){
         System.out.println("The number of digits in "+a+" matches the sum of its
digits.");
      }
      else{
         System.out.println("The number of digits in "+a+" does not match the sum
of its digits.");
      }
```

```
    }
}
```

*Status :* Correct *Marks : 10/10*
